

Graded Components	Weightage	Marks	comments	Feedback
Completing assigned readings and submitting questions and feedback on the readings and assigned videos >= 12 hrs prior to class. Highlights of the textbook PDF with notes will also help track progress. Your textbook PDF should be a live document that is shared with the TA and faculty instructor.	20 %	18%	I don't have a habit of highlighting and even if i try to i forget while reading. And any questions i had in the start were clarified in class. The next times i just reread the textbook, watched the videos and didnt actually have many doubts. I discussed with my teammate and we were able to solve some of our doubts via mutual understanding.	
Take-home problem sets (teams of 2 – you are encouraged to collaborate in pairs)	25%	23%	During class we worked on the exercises and assignments as a pair. And some take home assignments too. But i just realized that i havent committed them to github properly. A miscalculation on my part. I haven't been committing properly to my github. I will check and commit everything by tomorrow (Nov 5th) at the latest. I have one more in-class exercise to finish up on and then I will immediately commit everything. I did finish the assignments then, but encountered a battery problem with my laptop later which caused me to lose all my assignments before i could commit. But i definitely learned from them when i did them. I couldn't find the time to do them again after that because it was the time when all projects were due, even Neuro project.	
Quiz 1, Quiz 2, and Mini-Quizzes	15%	9.50%	I can't really compare my quiz1 and quiz2 but i liked writing quiz2 even though i may potentially score lesser there. <-- Last time. Now --> I scored 1 mark more than in quiz 1 in quiz 2. It is not an improvement but i would like to consider it as some progress. I was ranked 5th in class for quiz 2. I made some silly mistakes or i could have got 2-3 marks higher.	
Class participation (attendance and asking Qs, starting discussion threads on Moodle, etc)	10%	8%	I answered just once or twice in class. Talked to sir about doubts and suggestions regarding project. Asked a few questions to TA during 3-4 of our in-class exercise coding sessions. I didnt actually participate in any moodle discussions or threads, or publicly ask questions during class. I tried to attend all the classes except the times i couldn't ike when i was down with high fever and cold and when I had to go out of town with my family for personal reasons. I never tried to miss class explicitly.	
Final project (teams of 2) - 3 presentations	20%	19.50%	My teammate worked harder than me for this project. But I gave my contributions too. The research part, preprocessing part understanding dataset, Meeting with TA regarding that, keeping regular discussions to not leave out anything important, and mid-presentation+report. For the Final Presentation and report I put in more effort. We divided the work and completed our tasks and then worked on the other parts together. The discussions helped us learn a lot, small joint efforts were also helpful to cross check each other and keep up a good working spirit. And we completed presentation successfully. I justify the marks I put with our group effort.	
Final project (teams of 2) - final team report- peer reviewing	10%	8.50%	There is a little bit of terminology improvement we could have done. And the future plans. Besides that our report is easy to understand and clearly explains our project; the problem statement, the preprocessing steps, different methods used, the different analysis we performed and their permutation tests.	
		86.50%	I hope I can get an A. But with respect to my total I predict to get an A-.
